

I'm a student from Serbia. I love to code. My aspirations to become a web developer began in primary school. My professor showed me how I could write HTML in a notepad. It looked simple, write some stuff on any machine and see things change immediately. I knew I needed to learn it. But after going to my secondary school for three years, I realized that I wasn't going to learn to code there, so in the 4th year, my self-thought journey began.

PROJECTS

Savers Bank

Mar 2022 — Apr 2022
